ABOUT US

Founded in 2021, Hacker Simulations is a dynamic force in the cybersecurity industry. We bring together a team of passionate experts with a common goal - to fortify businesses against cyber threats. Our commitment to excellence, client-centric approach, and constant pursuit of knowledge set us apart. With a focus on simplicity and effectiveness, we make cybersecurity accessible and actionable for organizations of all sizes.

OUTLINE OF SERVICES

PENETRATION TESTING AS-A-SERVICE

WEB, MOBILE, NETWORK, CLOUD

NETWORK SEGMENTATION

ISOLATION & LATERAL MOVEMENT TESTING

EMAIL PHISHING ASSESSMENT

TARGETED PHISHING CAMPAIGNS

RED TEAM AS-A-SERVICE

SIMULATED CYBER ATTACKS

COMPLIANCE SECURITY ASSESSMENT

PCI-DSS, SOC2, GDPR, HIPAA, ISO27001

WHY CHOOSE US

- ✔ Certified In-House Testers
- ✔ Customer-Centric Experience
- ✔ Cutting-Edge Testing Techniques
- ✔ Clear and Insightful Reporting
- ✔ Rapid and Flexible Testing
- ✔ Security and Compliance

PENETRATION TESTING AS-A-SERVICES

Comprehensive security assessments for: **Web Applications**, **Mobile applications**, **Cloud** (AWS, Azure, GCP), and **Internal Networks** through simulated Cyber Attacks, providing ongoing protection against potential vulnerabilities and threats.

COMPLIANCE SECURITY ASSESSMENT

Full security audits, to help establish and maintain a robust security posture, and ensure your company meet regulatory compliance, such as: **PCI-DSS**, **SOC2**, **GDPR**, **HIPAA**, and **ISO 27001**.

RED TEAM AS-A-SERVICES

RTaaS simulates cyber-attacks identifying system vulnerabilities through ethical hacking, emulating real-world threat scenarios. Our service enhances security by proactively addressing potential threats, fortifying your organization against cyber risks.

EMAIL PHISHING ASSESSMENT

Identify and mitigate email-related security risks. Through simulated phishing attacks, our service assesses vulnerabilities, enhancing your organization's resilience against email-based threats.

NETWORK SEGMENTATION TESTING

Evaluates the effectiveness of isolating and preventing lateral movement within a network. Identify and addresses potential vulnerabilities in segmentation, fortifying against isolated and lateral cyber threats.
